

MONTROSE

ENVIRONMENTAL

Emissions Solutions

Fugitive Emission Inspections

Montrose Environmental is a leading fugitive emission management service provider to the Oil & Gas and Petrochemical Industries, specializing in the use of OPTICAL GAS IMAGING and leak measurement equipment, to locate and quantify hydrocarbon fugitive emissions.

Our technicians have unmatched experience, and industry/process knowledge. We perform accurate quantification of individual leak, process vent, internal valve, and tank top leaks/vents.

We use FLIR's GF-Series and Opgal OGI cameras, being the leading infrared hydrocarbon detection technology on the market today.

We also utilize the following technologies for quantitative emission/leak rate measurement: electrochemical/differential pressure meter, flow-through emission rate meters, calibrated bag for high volume applications, ultrasonic technology, and infrared absorption spectroscopy.

We currently operate throughout Canada and the United States, as well have been involved in several International projects.

Our Core Values

SAFETY

We consider safety management as our number one core value, and as such will continue to refine our programs and practices to maintain and improve jobsite safety.

PERFORMANCE

Performance in the work we do is key to success. Our staff are trained professionals with extensive experience, certification and recognized technical expertise.

QUALITY

We are committed to efficiency, professionalism and strong project management in order to provide quality service in a timely and cost-effective manner.

CUSTOMER SERVICE

Our commitment is to provide exceptional value to our customers through knowledgeable staff, quality work, and exceptional customer service.

Repair Tracking

Repair tracking is one of the most challenging aspects of maintaining regulatory compliance.

TARGET ONLINE is a comprehensive system to manage repair notifications, repair tracking, and provide you repair statistics for optimization.

- New leak notifications and repair due date reminders are automatically sent to your facility personnel via email.
- Repair activities can be easily updated in TARGET ONLINE to confirm the work has been completed, and to ensure regulatory compliance.

Depending on the jurisdiction in which you operate, government regulations have data management, reporting, and record keeping requirements. TARGET ONLINE software allows you to comply with these requirements through one centralized software application providing the necessary detail for reporting purposes.

Regulatory Reporting

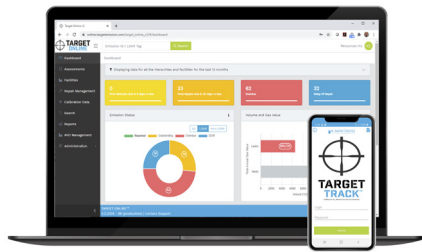

Fugitive Emissions

DATA CAPTURE MOBILE APP

TARGET TRACK is a full-featured Android mobile application for recording fugitive data during inspections. Data capture categories include:

- Safety management – completion of daily hazard assessment form.
- Facility information – record details of facility type, equipment/process list, and contact information.
- Assessment information – record details of survey date, technician, and instrument information.
- Component information – record details of component service, type, and size for each leak detected.
- Leak information – record details of leak description, safety hazard rating, and repair recommendation.

Install TARGET TRACK on any Android device to capture leak data during inspections.

Regardless of whether you have an internally managed program, or you subcontract the inspections to Target Emission Services, all leak data will be uploaded onto TARGET ONLINE management software for you to track repairs, and manage regulatory reporting.

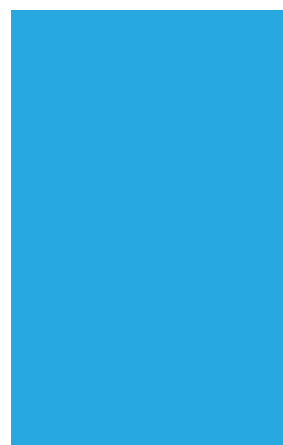

Centralized Program

MANAGEMENT SOFTWARE

TARGET ONLINE is a centralized cloud-based data management software for the overall administration your company's Fugitive Emissions Management Program. The system provides access to leak survey data for all facilities surveyed. Features include:

- Full leak detection and repair tracking functionality, with the ability to link data to company work order system.
- Synchronization of assessment data captured using TARGET TRACK Android application.
- Management of all pictures and videos captured during field inspections.
- Numerous reports for administration, maintenance, regulatory reporting, and emission details.
- Leak/vent rate data integration with corporate emission management systems.
- Access for unlimited company users via a user-friendly, online interface.

Reach Out

We're ready
to get started.

We look forward to speaking with you about how Montrose can make the difference for your next project.
