

THE ONLY INFANT PROBIOTIC WITH  
**THE PROVEN**  
BENEFITS OF *B. infantis* EVC001

Diaper rash, colic and gas are linked to pathogenic bacteria in the infant gut. Now there's a clinically-proven way to change the infant gut microbiome in your patients.

**Evivo, activated *B. infantis* EVC001**, is the only infant probiotic that reduces gut pathogens and improves gut function within days.

## 01 PATHOGENIC GUT BACTERIA HAVE HARMFUL EFFECTS

### INFANTS TODAY HAVE AN OVERABUNDANCE OF PATHOGENIC GUT BACTERIA

Pathogenic gut bacteria and microorganisms like *Strep*, *E. coli*, and *C. diff* result in inflammation, discomfort and an increased risk for short- and long-term health issues.

*B. infantis*  
EVC001

### EVIVO REDUCES GUT PATHOGENS BY 80%<sup>1</sup>

Evivo's proprietary strain *B. infantis* EVC001 is essential for babies, especially those born via C-section or exposed to antibiotics during delivery. Evivo encourages healthy microbiome development, creating a protective environment in baby's gut.

## 02 EVIVO REDUCES FECAL pH, INHIBITING GROWTH OF PATHOGENS

Fecal pH provides a window into the infant gut microbiome.

Evivo lowers fecal pH to the infant reference range recently updated by LabCorp, protecting against:

Diaper Rash

Colic

Fussiness and Gas

## 03 EVIVO WORKS WITH BREASTMILK TO REDUCE PATHOGENIC GUT BACTERIA

### CAPTURE

Evivo's proprietary strain uniquely utilizes breastmilk to replace pathogenic bacteria with beneficial bacteria in the infant gut.

### CONSUME

Only Evivo can fully metabolize all Human Milk Oligosaccharides (HMOs) present in breastmilk.

### CONVERT

Evivo converts HMOs into nutrients that support immune function and suppress the growth of pathogens.

EVIVO

When the signs of diaper rash, colic and gas point to an unhealthy infant gut microbiome, **the answer is Evivo**, the infant probiotic backed by more than a decade of research and numerous scientific publications.

## 04 WHEN BENEFICIAL BACTERIA THRIVE, SO DOES BABY'S GUT HEALTH

Increased levels of beneficial bacteria lower the pH of the gut and suppress pathogen growth.

FEED EVIVO,  
ACTIVATED  
*B. infantis* EVC001,  
ONCE DAILY

↑ 79%

Increase in Bifidobacterium<sup>2</sup>

↓ 80%

Less pathogenic gut bacteria<sup>3</sup>

↓ 98%

Less intestinal Inflammation<sup>5</sup>

↓ 90%

Reduction in antibiotic resistance<sup>5</sup>

# OUR PROPRIETARY STRAIN, YOUR BEST RECOMMENDATION

## 3,000 reviews with an average 4.7 star rating

Evivo lowers gut pH and reduces pathogens, making a difference that parents notice.

### Better sleep.

**52%**

of moms noticed  
baby slept longer.

"Evivo has helped my five month-old in so many ways. He sleeps better at night and has significantly less spit-up. It has made quite the difference in our lives!"

**-Chrissy, TX**

### Less gas and fussiness.

**63%**

of moms saw a  
decrease.

"We started Evivo when our little girl was four weeks old. She came home from the hospital happy, but became progressively colicky. Our healthcare provider suggested Evivo. We saw a change in just a few days!"

**-Mary, CA**

### Decreased diaper rash.

**72%**

of moms report a  
significant or complete  
reduction

"My baby girl went from having eight bowel movements a day to having one, and diaper rash is no longer a concern. I would recommend Evivo to anyone."

**-Bettina, CA**

**The right choice for infants 0-6 months.**  
**Protect them with the patented power of Evivo.**
